

Invoice Generator by Strynder — PRD

1. Product summary

Product name: Invoice Generator by Strynder

Platform (v1): Responsive web app (desktop + mobile browser)

Primary market: Nigeria — small/medium business owners, creatives, freelancers

Core value: Let users create professional invoices in minutes by reusing saved business identity and payment details, with Naira as the default currency.

v1 delivery: PDF download only (no email send, no shareable link).

2. Problem statement

Nigerian SMBs and freelancers often invoice via WhatsApp messages, Word docs, or ad-hoc templates. This is slow, inconsistent, and unprofessional. They need a simple tool that:

- Stores business branding once and reuses it
 - Supports NGN-first invoicing with USD/GBP when needed
 - Produces clean, downloadable PDFs suitable for clients and record-keeping
-

3. Goals and success metrics

Goal	Metric (v1)
Fast invoice creation	Median time from "New invoice" to PDF download < 3 minutes
Profile reuse	≥ 80% of invoices use pre-filled business details
Adoption	Registered users who create ≥ 1 invoice within 7 days
Output quality	PDF renders correctly on mobile and desktop viewers

Non-goals (v1): Payments collection, accounting/ledger, multi-user teams, native mobile apps, client CRM, recurring invoices, e-invoicing compliance automation.

4. Target users

Primary personas

1. **Freelancer / creative** — designer, writer, photographer; invoices per project; needs polished PDFs and optional USD/GBP for foreign clients.
2. **SMB owner** — retail, services, agency; invoices regularly; may need VAT line items.
3. **Sole proprietor** — trades, consulting; minimal setup; bank transfer details on invoice.

User needs

- One-time business profile setup (all fields optional)
 - Quick line-item entry with automatic totals
 - NGN default; switch currency per invoice
 - Branded header with color choice
 - PDF export for WhatsApp/email attachment outside the app
-

5. User flows

5.1 Registration and auth

- Email + password sign-up and login (via Supabase Auth)
- Password reset via email
- Session persists across browser visits

5.2 Onboarding (skippable)

After first login, prompt user to complete business profile and payment details. All fields optional; user can skip and complete later from dashboard.

5.3 Dashboard

Central hub with:

- **Business profile** — edit identity fields
- **Payment details** — edit bank/payment fields
- **Invoices** — list of past invoices (view + re-download PDF)
- **Create invoice** — primary CTA

5.4 Create invoice

1. Business/payment blocks auto-populated from saved profile (editable per invoice without overwriting profile)
 2. User enters client details and line items
 3. Optional VAT toggle
 4. Select header color theme
 5. Select currency (default NGN)
 6. Preview → Download PDF
-

6. Functional requirements

6.1 Account and authentication

ID	Requirement	Priority
AUTH-01	Users can register with email and password	P0

ID	Requirement	Priority
AUTH-02	Users can log in and log out	P0
AUTH-03	Password reset flow	P1
AUTH-04	One account per email	P0

6.2 Business profile (dashboard)

All fields **optional**. Saved per user; used as defaults on new invoices.

Field	Type	Notes
Full name	Text	Personal name
Business name	Text	Displayed prominently on invoice if provided
Logo	Image upload	PNG/JPG/WebP; max 2MB; stored in Supabase Storage
Address	Textarea	Multi-line
Phone number	Text	Nigeria format friendly (+234)
Email address	Email	Business contact email
Business slogan	Text	Short tagline under business name

ID	Requirement	Priority
PROF-01	CRUD business profile fields	P0
PROF-02	Logo upload, preview, remove	P1
PROF-03	Profile data pre-fills new invoices	P0
PROF-04	Per-invoice overrides do not mutate saved profile	P0

6.3 Payment details (dashboard)

All fields **optional**.

Field	Type	Notes
Bank name	Text	e.g. GTBank, Access Bank
Account name	Text	Name on account
Account number	Text	Numeric/string
Additional payment note	Textarea	e.g. "Sort code", PayPal, MoMo instructions

ID	Requirement	Priority
PAY-01	CRUD payment detail fields	P0
PAY-02	Payment block shown on invoice only if at least one field filled	P0
PAY-03	Payment data pre-fills new invoices	P0

6.4 Invoice creation

Invoice metadata

Field	Required	Notes
Invoice number	Auto-generated, editable	Format: INV-YYYYMMDD-### or user-defined prefix
Date of issue	Yes	Default: today
Due date	No	Optional
Currency	Yes	Default NGN; options: NGN, USD, GBP
Client name	Yes	
Client email	No	Stored only; not emailed in v1
Client address	No	
Notes / terms	No	Footer text

Line items (tabular)

Column	Required	Notes
Order (#)	Auto	Row index, reorderable
Description	Yes	Service/product name
Quantity	Yes	Numeric, min 1
Unit price	Yes	In selected currency
Line total	Computed	qty × unit price

ID	Requirement	Priority
INV-01	Add, edit, remove line items	P0
INV-02	Auto-calculate line totals and subtotal	P0
INV-03	Optional VAT toggle	P0

ID	Requirement	Priority
INV-04	VAT rate editable when enabled (default 7.5% — Nigeria standard)	P0
INV-05	Display subtotal, VAT amount (if on), grand total	P0
INV-06	Currency symbol/format per selection (■, \$, £)	P0
INV-07	Save invoice draft to account history	P0
INV-08	Duplicate existing invoice	P2

VAT behavior

- Off by default
- When on: VAT = subtotal × rate; Grand total = subtotal + VAT
- VAT row labeled clearly on PDF (e.g. "VAT (7.5%)")

6.5 Invoice design and branding

ID	Requirement	Priority
DES-01	Professional, clean invoice layout	P0
DES-02	User selects header color from preset palette (≥ 6 options)	P1
DES-03	Logo and business name in header when provided	P0
DES-04	Responsive preview before download	P0
DES-05	PDF matches on-screen preview (A4 portrait)	P0

Suggested header palette (v1): Navy, Teal, Emerald, Burgundy, Charcoal, Gold-accent neutral.

6.6 PDF export

ID	Requirement	Priority
PDF-01	One-click PDF download from preview	P0
PDF-02	Filename: {invoice-number}_{client-name}.pdf	P1
PDF-03	PDF includes all visible invoice sections	P0
PDF-04	Re-download from invoice history	P0

6.7 Invoice history

ID	Requirement	Priority
HIST-01	List invoices: number, client, date, total, currency	P0
HIST-02	View invoice detail	P0
HIST-03	Re-download PDF	P0

7. Non-functional requirements

Area	Requirement
Performance	Invoice preview loads < 2s; PDF generation < 5s
Responsiveness	Usable on mobile browsers (320px+)
Security	Supabase Auth for sessions; passwords hashed by Supabase; HTTPS; Row Level Security (RLS) on all database tables so users access only their own data
Availability	Target 99% uptime post-launch (Vercel + Supabase SLA)
Data	User can delete account and associated data
Accessibility	Form labels, keyboard nav, sufficient color contrast on themes

8. Information architecture

```
/ (marketing landing – optional v1)
/login
/register
/forgot-password
/dashboard
  /profile
  /payment-details
  /invoices
  /invoices/new
  /invoices/:id
  /invoices/:id/preview
```

9. UI / UX requirements

Design principles

- Minimal steps to first invoice

- Nigerian context without clutter (NGN default, +234 phone hint, local bank labels)
- Premium feel: generous whitespace, clear typography, restrained color use

Key screens

1. **Dashboard** — cards for profile completion %, recent invoices, "Create invoice" button
2. **Profile / Payment** — grouped optional fields; empty states with short guidance
3. **Invoice builder** — left: client + dates; center: line-item table; right/sidebar: totals, VAT, currency, theme
4. **Preview** — full invoice mock; sticky "Download PDF" action

Empty states

- No logo: show business name text only
- No payment details: omit payment section on PDF
- No invoices yet: illustration + CTA to create first invoice

10. Data model (conceptual)

All `user_id` columns reference `auth.users.id` in Supabase.

User — managed by Supabase Auth (`auth.users``: id, email, created_at)

BusinessProfile — user_id, full_name, business_name, logo_url, address, phone, email, slogan, default_currency, default_header_color

PaymentDetails — user_id, bank_name, account_name, account_number, additional_note

Invoice — id, user_id, invoice_number, issue_date, due_date, currency, client_name, client_email, client_address, vat_enabled, vat_rate, header_color, profile_snapshot, payment_details, notes, subtotal, vat_amount, grand_total, status

LineItem — id, invoice_id, sort_order, description, quantity, unit_price, line_total

Relationships: User has one BusinessProfile, one PaymentDetails, many Invoices. Invoice has many LineItems.

11. Technical stack (v1)

Layer	Decision
Frontend	Next.js (App Router), React, TypeScript, Tailwind CSS
Backend	Next.js Server Actions or Route Handlers
Database	Supabase PostgreSQL
Auth	Supabase Auth (email/password, password reset)
File storage	Supabase Storage (logo uploads)
PDF	<code>@react-pdf/renderer`</code> (client-side)
Hosting	Vercel + Supabase cloud

12. Release scope

MVP (v1.0) — must ship

- Auth (register, login) via Supabase Auth
- Business profile + payment details (all optional)
- Invoice CRUD with line items, VAT toggle, currency (NGN/USD/GBP)
- Header color themes
- Preview + PDF download
- Invoice history + re-download

v1.1 — fast follow

- Password reset (Supabase built-in)
- Logo upload (Supabase Storage)
- Invoice duplicate
- Profile completion indicator

v2+ — out of scope

- Email invoice to client
- Shareable public invoice link
- Client directory
- Recurring invoices
- Paystack/Flutterwave payment links
- Multi-user business accounts
- PWA / native apps

13. Assumptions and dependencies

Assumption	Notes
Users export PDF and share via WhatsApp/email manually	Per v1 delivery choice
Nigeria VAT default 7.5%	User can override rate when VAT enabled
English-only UI	v1
No legal/tax advice	Disclaimer: user responsible for tax compliance
Free tier for launch	Monetization TBD
Supabase project provisioned before build	Auth, PostgreSQL, Storage configured
NDPR compliance	Data region chosen per Supabase project settings

14. Risks and mitigations

Risk	Mitigation
PDF layout breaks with long descriptions	Truncate/wrap rules; test with max content
Logo upload abuse	File size/type limits; Supabase Storage policies
Currency formatting errors	Use Intl.NumberFormat per currency
Low profile completion	Skippable onboarding; show benefits on empty states
RLS misconfiguration	Test policies; users cannot read/write other users' rows

15. Open questions

- Monetization: free forever vs freemium (invoice limit)?
- Invoice number format: strict auto vs fully custom?
- Additional payment methods in v1.1 (Paystack link field)?
- Terms of service / privacy policy for Nigerian data protection (NDPR)?

16. Acceptance criteria (v1 done definition)

- User can register, log in, and skip optional profile setup
- User can save business and payment details; fields appear on new invoices automatically
- User can create invoice with line items, optional VAT, and NGN/USD/GBP
- User can pick header color; preview reflects choice
- User can download PDF that matches preview
- User can view history and re-download past invoices
- App works on mobile and desktop browsers
